Chain Company Drop Forging

CHANGE®

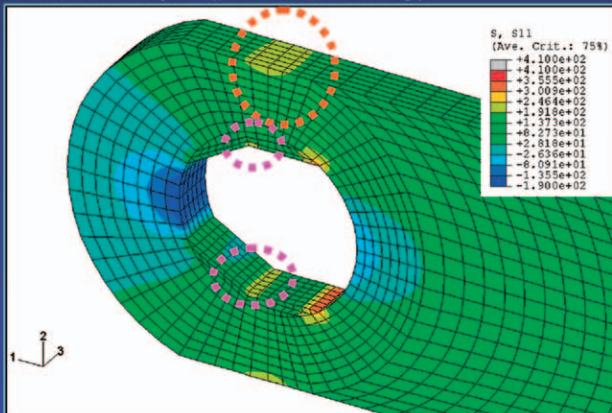

for Success

T-ALPHA® - The new generation of conveyor chains offers a 20% higher safety factor

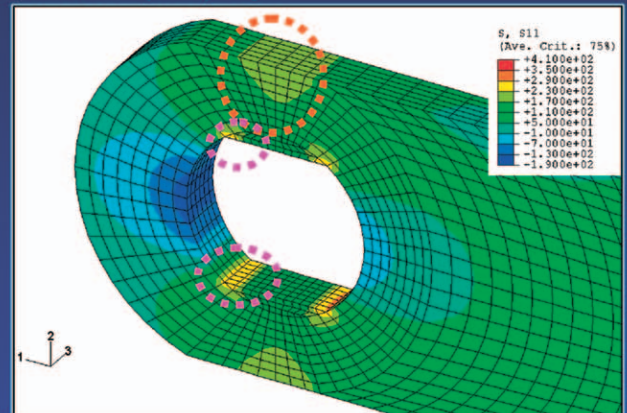

Conveyor chains are widely used in many industries for the conveying of bulk material. To cope with the ever increasing installed power demands, THIELE developed the T-Alpha® chain.

Custom-designed shaping of bores and bushings assure greater reliability under the most difficult operating conditions.

T-Alpha® Style (patent pending)

Standard (DIN) Style

- 20% stronger than DIN
- Lower stress concentration due to better load sharing
- Longer life
- Increased elongation prior to fracture
- Optimal in-use elastic qualities
- Improved load and cyclic qualities
- Compatible with like-design conveying systems
